KEYMACRO is an easy to use macro recorder with a basic dictionary, a function list, and many more. Keyword generation is also supported. It can also analyze your source code and suggest appropriate keywords for methods, properties, and classes. Description: In this tutorial we will learn how to use Oracle WebLogic Server with Eclipse for a development web application. Sometimes you are required to configure multiple instances of an application on a single system. In such a situation, you are often unable to use a central domain name for configuration purposes. We will demonstrate how to work around this problem by deploying multiple EAR applications on Oracle WebLogic Server. Step 1: Configure Oracle WebLogic Server Oracle WebLogic Server is a Java-based application server that can be used to run and manage Java Enterprise Edition (JEE) applications. To install WebLogic Server, follow the instructions here. After starting WebLogic Server, follow the screen prompts to start it. The following screen shot shows WebLogic Server started: If you are already familiar with Oracle WebLogic Server, you may now proceed to Step 2. Step 2: Configure Oracle WebLogic Server for Remote Administration Oracle WebLogic Server includes an HTTP and HTTPS server that can be used to remotely administer the server from a web browser. The HTTP port for administration is listed in the following screen shot: Note that the port number shown is not the same as the port used for remote administration. To configure the administrator HTTP server, follow these steps: 1. Double-click the Administrators to open the Administrator Information screen. 2. In the Web Logon dialog, enter the domain name and administrative user name. If you have not already setup a domain name, click New to enter the domain name. If you have configured a domain name, select it in the Domain drop-down list and enter the username. 3. In the Server Location dialog, select the check box to specify the server directory. 4. In the Start button, select to start the Server. This will start the HTTP Server for administration purposes. 5. In the Server Status dialog, click the button to view the server status and details. You will see the details of the server configuration including the server IP address. You can use this information in Step 7 to configure a NAT firewall to allow inbound HTTP and HTTPS traffic to the server. Step 3: Install Java EE in WebLogic Server 77a5ca646e

Simple, yet highly-intuitive interface There's not much to look at when first running the application. The first impression is somewhere around the middle, with a simple interface, yet little time required to get acquainted with features. Several color schemes, as well as a palette to pick your own give you the possibility to make the application blend in with your desktop. Easily create and organize personal databases Either running on an existing database, or creating a new one from scratch, the overall process is easy to understand and put into practice. Not to get confused, it's no the type of database used by websites to store credentials in, but a personal one in which you arrange files and web pages. With this in mind, as well as the intuitive design, you can start to organize the categories used to store files. This is done from a side panel that displays a tree view of your elements. You can open up more databases at the same time, each being displayed with its own child components. Support for multiple types of content Furthermore, pages you create in Library.NET Professional (Access) can be filled out with plain text, code with support for an abundance of programming languages, files of all kinds, images, entire web page content, favorite URLs or simply set dependencies with other project elements. You can easily find anything of interest thanks to an integrated search engine that is able to retrieve any query almost instantly. It also comes with several advanced options that let you fully configure search criteria. When all your work is done, the database can be secured with a password and even compressed to take up less space. A few last words On an ending note, Library.NET Professional (Access) is a powerful management and cataloging utility that surely comes in handy if your work involves countless files that are difficult to track. The intuitive design gets you quickly up and running, customization options make it suit your style, while the set of features appeals to any field of expertise.
