Import and markup digital prints, CAD models and other file formats. You can import a CAD model, PDF or image from the web to bring in geometry, text and other design elements. AutoCAD marks up the imported design elements in your drawing to aid your communication with the designer. In addition, you can share the marked-up drawings with your team to ensure that they are aware of any changes or updates. (video: 3:45 min.) Enhanced Data Entry: Allow the creation of customizable data fields in a drawing. Then display the drawing information in the form of a graphic object. This means you can create and format icons, graphs, calendars and date-time representations. The graphic objects, such as rectangles, ovals and circles, are drawn from the data in the field and can be configured with gradients, borders, line widths and transparency. In addition, you can create field templates. (video: 1:55 min.) Create a drawing document with different components of the information. For example, you can create a table of contents, footer and other documents. You can also create component drawings, make your document hierarchal and easily switch between the components. (video: 3:45 min.) Advanced features for Drafting and Modeling: Free floating scale: Create accurate drawings that are more precise and easier to read. Let your drawings float on any size. No more guessing or estimating. (video: 1:50 min.) New and improved scaling tools. AutoCAD scaling tools are now much faster and easier to use. Faster and more accurate snap to features: Reduce the number of steps required to snap to a feature and have it snap accurately. (video: 1:30 min.) New functionality for 3D lines. Define more 3D properties. Add an option to specify which active profile to use for drawing. Simplify 3D line creation. Integrated 3D and 2D drawing: A single window for all types of 2D and 3D drawings. Take advantage of your current 2D or 3D drawings. Edit and/or modify 2D drawings in the same view as your 3D drawings. Or create 2D drawings directly from 3D models and get the most accurate and realistic drawings. (video: 3:45 min.) Join and create solid objects from 2D drawings.
