Choose "Scenic for Architecture", uncheck the box "Automatically Create Scenics", and press on "Install". Wait while it's installing. Now, you have to prepare the database, with the following settings: In a personal computer, if you have Windows installed, you can use the trial version of Autodesk Scenic, so that the database will be created before installing Autodesk AutoCAD; and you'll have a default database already, so it's not necessary to do anything else to prepare it. However, in Mac OS you will have to do something else to have a default database. First, launch Mac OS X on your computer, and then you'll be able to use Autodesk Scenic. In the search bar, write "Create Scenic Database" and select the menu that appears. Click on "Create Database" and follow the instructions. Finally, press on "Finish" and wait while the creation of the database is finished. In both cases, on the top of the application you'll have the main menu with the options: "Create Scenic Database" and "Export Scenic Database". You will be able to use the following settings: In order to do that, you'll have to choose the right path to the database that was created. For example: C:\Users\MyUserName\AppData\Roaming\Autodesk\AutoCAD\2011\1R12 Also, you will have to select the Autodesk Scenic and choose the path of the database: C:\Users\MyUserName\AppData\Roaming\Autodesk\AutoCAD\2011\1R12\Scenic\Data You will be asked to enter a name for your database. You can write the name, for example: "MyDatabase" and press on OK. Now, you will be able to choose the correct option: Open Choose the files that you want to open, using the
