Offloading of scripting tasks AutoCAD offers a range of ways to allow user automation and offload of repetitive tasks. There are two major approaches to scripting a host application, through its API and by using custom add-on applications for that host application. AutoCAD's scripting API is available for programmers wishing to write custom add-on applications, which would operate under the AutoCAD host application. AutoCAD also supplies a large number of add-on applications for many of its programs. In both cases, users can either script the add-on applications directly, or script through a configuration file. Add-on applications include: Biml scripting for Bentley Microstation 3D modeling tools for Autodesk Revit DXF for AutoCAD AutoCAD Drawing Assistant GeoReach for Google Earth Viewpoint for AutoCAD BatchCopy 3DUV for AutoCAD AutoCAD Exchange AutoCAD Exchange Revit Architectural Desktop Revit API (RADAPI) User interface AutoCAD has two user interfaces: a command-line interface (CLI) and a Windows graphical user interface (GUI). The original version of AutoCAD was text-based. Starting in 1985, Autodesk introduced the interface known as the "Tecplot" scripting language and called it "LAS" for "Linear Analysis System" to emphasize the fact that the interface was tied to the technical computing language Tecplot. The interface and scripting language were considered to be a major design flaw and a major reason for the lack of use of the product. It was moved to the core product, and the scripting language was renamed to AutoLISP. For example, some technical drawings, such as structural engineering, could have access to tens of thousands of dimensions, hence the need for text-based drawings. In 2004, Autodesk published a new version of AutoCAD which included a GUI interface and a native scripting language. The result was that the product would run on either platform. In 2017, Autodesk released AutoCAD LT 2017, a version of AutoCAD intended for "non-technical users". APIs There are two kinds of APIs: platform specific, and host application. The platform APIs provide access to the function of the operating system. Host application APIs are specific to the AutoCAD platform, such as Windows a1d647c40b

With the prospect of remand in mind, we will limit our decision to the minimal facts necessary to resolve the issue before us. Our de novo review is appropriate because Judge Wallace's decision was based on an interpretation of the federal constitution. We will cite federal cases because the Supreme Court of the United States has expressed views on the issue of double jeopardy, but we will not adopt a construction of the Tennessee Constitution based solely on the Supreme Court's views.
