The first one is from the Medieval era, BFFs Conan the Barbarian and Cimmerian! With a base set of Conan's 'normal' heroic proportions and a body type that is similar to Beowulf, Conan stands at around 12" tall. It's easy to see Conan's scrawny muscle mass and weak build from his 'regular' heroic counterparts. The quality of the sculpt and the paint job is absolutely on point. Like the other new figures, I had a lot of trouble taking shots of this guy as he only stands as still as stone. For those that enjoy dark and moody images, this statue is right up your alley! Cimmerian is the one on the left. He has a different body type with a more angular and muscled build. His tattered black clothes and long swords make him look like a badass, even with a scary-looking face! The paint job is gorgeous as always. I am pleased with both of the new releases, which come at a great price. I am very happy with the quality of the figures and how they turned out. The paint is flawless and the sculpt is impressive. The workmanship that went into each figure was top-notch and that really shows. I am excited to see what they do next!
