What's New in the?

The Markup Import and Markup Assist

dialog box lets you import or import an external document (previously a graphic import option). You can import a list of up to 1,000 items, or you can import each item manually by clicking on a checkbox. You can import a selection of comment and label text, which you can modify in place. You can also use the new Markup Assist feature to quickly import a file or document of comments or labels. With the Markup Assist dialog box you can import a list of up to 1,000 items, or you can import each item manually by clicking on a checkbox. You can import a selection of comment and label

text, which you can edit in place. **Toolbar Draw Order Improvements:** Improvements to toolbar draw order, based on your most-used tools. The toolbar is now organized so that the most frequently used tools are listed at the top. The drawing tools are arranged in rows, with the top row for the most commonly used tools. The drawing tools that are used most often are in the upper-left corner of the toolbar, and the drawing tools used less often are at the bottom of the toolbar. You can easily rearrange the drawing tools to make them more convenient for you. Simply drag and drop

the drawing tools to change their order. See an example in the video. Improved Render Settings: The render settings can now be applied to the entire drawing. Previously, each drawing was treated independently, which could lead to unexpected results. You can now apply the same render settings to all of your drawings. You can also apply render settings in the default drawing template. Drawing Settings Improvements: When you edit a drawing template, you can use the drawing settings to modify the drawing defaults and properties. You can also use these settings to specify which drawing

templates to use. The Drawing Template Editor now shows a page of drawing settings that are available to modify in a drawing template. These settings include the drawing template defaults, the draw templates that you've specified, and any drawing template properties that you have modified. See an example in the video. Slicing Improvements: New non-breaking values in the Slicing pane. The Slicing pane now shows non-breaking values. You can continue to use the new legacy slice values when you're slicing by data values.
