BeauGauge - Instruments Suite is a powerful tool that allows you to design and edit various models of virtual industrial controls, including meters, sliders, scales, dials or gauges. These models can easily be integrated with applications, such as science, automation or surveillance simulation. Scientific modeling made easy BeauGauge - Instruments Suite is designed to help you create a large variety of virtual controls for simulation

programs. The model templates include meters, sliders, scales, dials, gauges, knobs, buttons, switches and several other components. The application offers you several templates, but you may edit each element. The Designer component in BeauGauge - Instruments Suite allows you to adjust the layout of the caps, pointers, labels, range bars, tick marks, scale appearance and background. Each element is stored on a different layer, which makes individual editing very simple. The Designer tab also features a

static preview area, in which you may observe each element or the final product. Quickly set the elements' style Each layer in the controller design in BeauGauge - Instruments Suite allows you to edit a separate element. The program includes several graphic templates for each pointer, gauge or indicator and allows you to modify the colors, borders, background, width and specific options. The Control layer allows you to change the location of the controller to center/off-center, modify its angle,

orientation and value span. The New tab contains graphic previews of all the controllers that you can create and edit; it is also a list of templates that you can easily customize. Preview the controller's functionality The Preview tab in BeauGauge - Instruments Suite offers a dynamic view of the controller and the indicators' movement. You can view the manner in which the pointer moves from the starting value up to the maximum ones and even the danger zone. It is a useful tool since it allows you to preview the way the indicator looks in

an application. BEAUGAGUE - INSTRUMENTS SUITE is an advanced 3D visualization toolset for PLCs, which allows you to design, visualize and control an unlimited number of user-defined parameters as a virtual instrument. No PLC coding is required. Simply drag and drop the components and you are done. You can control, edit and preview the absolute and relative values of virtually any type of real device that is connected to your PLC over the data bus. Dozens of

realistic components included. Simulate the real life behavior and appearance of hundreds of meters and control panels from Simatic, Beckhoff, Inverto, Proclinic, TE, Winbond, IntelliWrap and Rose. Design and control virtual instruments based on the PLC data from any type of device - including remote I/O systems. No PLC coding is required. Design the look and behavior of any type of virtual meter, scale, dial or gauge. Analyze, design and visualize your instrument without writing a single line of code. BeauGauge -

Instruments Suite boasts 1) Label and pointer 3D preview, including absolute and relative values 2) Hundreds of different meters and indicators in hundreds of different styles 3) Many new 3D components from real manufacturers 4) Let you control your virtual instrument from any PLC with any device, without any programming 5) Hundreds of style variations for meters, indicators and dials 6) Simulate the behavior of any type of real-world instrument using a wide variety of parametric controls 7)

Determine the movement patterns of hundreds of meters, indicators and scales. 8) Quickly design complex controls and mechanisms without the need to write any code References to products, services, processes, activities, events, conditions or persons existing at any time or by whomsoever in the universe, real, imaginary or hypothetical, are intended only to reflect the reality of the time of their publication, and the authors, heirs, successors, assigns, legal representatives and authorized agents shall not be

Are you tired of the boring desktop calculators and slide rulers that often accompany the device you use? The next time you find yourself using an analog control to perform an industrial control function, pull out the BeauGauge – Instruments Suite. This program designed to enhance your abilities by giving you easy-to-use control virtual instruments. By using BeauGauge – Instruments Suite you no longer need to worry about space on your

desktop. With its Virtual Instruments you may build a wide range of models using any of the compatible gauges, dials, buttons and handles that you use on a daily basis in the industry. Build a wide variety of virtual control models BeauGauge – Instruments Suite is a set of instruments, that allows you to edit a wide variety of models from a wide range of gauges, knobs, dials, indicators, switches, buttons and handles. Each virtual instrument is represented by a layer that you may customize and use in any application. BeauGauge –

Instruments Suite offers you several high-quality background templates with a wide variety of calibration patterns. What's New in This Release: Gauge / Knob templates are now saved as the actual template files, with the Template name being the original template name. Added ability to specify any number of points, shapes, or lines as 'tooltips' on gauges. Added ability to edit images embedded in the template as an image map, much like maps. More accurate display of values for the scales. Added ability to change

pointers in the templates. Added support for the 'user' template. A user is basically another template, but with no visual component. The user template can be used for buttons, switches, etc. Scales: Added ability to specify 'Tooltips' for each value in the scale. These values will be displayed on mouse hover. Added ability to display a scale'splitter' that separates the tick marks by a specified number of places, in order to increase legibility. Dial: Added ability to specify 'Tooltips' for the dial face. These will be displayed on

mouse hover. Added ability to specify a 'Scroll Wheel', which allows one to scroll through the dial as one scrolls the wheel. Buttons: Added ability to specify 'Tooltips' for the button face. These will be displayed on mouse hover. Added ability to specify a 'Scroll Wheel', which allows one
