Block Replace is a replacement feature for AutoCAD that allows you to replace blocks in your drawing, while preserving or merging the attribute data. It also allows you to search for blocks, and register and view them. In addition, you can update or replace blocks in your drawing. The interface provides two main views: a live interactive grid with block information and a list of blocks with filter options. You can set up to include various types of blocks in your list. For example, you can:

- Include blocks that are already defined in the drawing.
- Include blocks defined in all folders in the current drawing, specified directories, or all drawing folders.
