The colors are rather chalky and could be more vivid, whereas the charts could be interactive, for instance. You can add your own locations, but the readings are estimations While the app comes with numerous graphics of the best-known metropolises and cities across the globe, it does not include all villages and cities out there. Then again, you can also preview the latitude and longitude of the location, a feature that can help you make an estimation of the sunrise or sunset time if you are in a nearby location. Therefore, in case you are planning a trip that is not charted within the app, you can specify the time zone, geographic coordinates, country and city. It is important to note that in this case, the app cannot provide you with a precise chart, but rather makes an estimation of these 2 times of the day. It would have been useful if the program got its data from meteorological stations and enabled you to see the weather conditions as well. After all, the last thing you want is to have rain during your big moment. An overall fun application Regardless of whether you are planning a romantic getaway or simply want to make the most of your next trip, Daylight Chart can lend you a hand by listing the sunset and sunrise in a plethora of place around the globe.
