Archive Moving Wizard is a great utility for anyone who wants to organize and clean up their libraries. The process is very simple: just drag

and drop your files in the Archive Moving Wizard window, set the file structure you want to include in it, and then start moving. Once you finish your job, Archive Moving Wizard creates a ZIP archive in a secure folder, which will allow you to archive your files in one go, rather than accumulating archive files over time. Archive Moving Wizard's main window displays the current archive location and allows you to copy the archive to a new

location: you are guaranteed you'll always know where your archive is located. You can also close the window to see the contents of the archive and you can move the archive files in the window. You can also sort the archive by the date or by the size of the files included in the archive, and make the archive password protected. You can also add password protection to the.zip archive file, so that only the owner of the archive can

extract it. Archive Moving Wizard Express is a simpler version of Archive Moving Wizard. It lets you extract your archives, archive folders or even folders in zip or rar archives, and let you decide where you want to extract them. You are given a window that contains the archive location and the extraction location, and there is also a button to start the archive extraction process. If you don't want to extract files directly into folders,

but you want to extract them into files with the same name, you can set the path of the extraction folder: the program extracts the archive into a folder whose path you specify and extracts files of the same name.
