A: OK so this looks like an operating system issue Try this instead: [root@localhost ~]# ls -lha / | grep 'root@localhost@localhost' | awk '{print \$8,\$9,\$10}' Here's how it works: ls -lha / - list all the files in the directory grep 'root@localhost@localhost' - find any lines containing any combination of '@localhost', 'root@localhost' - in this case the combination is harmless, but it may have to be changed to account for other cases where you might have more complicated patterns awk - print the filename and path as you requested Q: How do I get a message out of a command event handler? I need to send some form of message out of a command event handler. I use the following code, but it always ends in an exception: lock (e.Command) { e.Handled = false; Logger.Info("MyCommand:", e.Command); } An exception is thrown by the line that tries to Logger.Info() which is: The message [X] cannot be handled by the MessageForwardingHandler because it is of type [Y] and it does not implement any of the following interfaces: [Z].
