Tailor your own Windows with free CopyTailor For too long I've had to use third party cloning and duplication software costing money. Also, some of them interfere with third party software and others leave their own exacting set of threads and files behind. I wanted to make a program that would provide me the same ease of use and convenience that the commercial software I'd tried before provided, at a fraction of the cost, but not be as invasive as just copying the entire contents of a folder. This is that software, at it should save you thousands of dollars in the long term. CloneTailor is a very small program that you can put on any computer and run very quickly. It copies or moves files and folders in your computer to another, where you can then use them in whatever way you like. Tailored Windows that performs whatever you desire The program saves your time, it simplifies tasks, and it allows you to select the exact way that you use your computer. This means that the program is tailored to your specific use, it can't be used by a person that always uses their computer to surf the internet and ignore their computer work. In fact, you can use the software to customize your computer in the exact way that you want. When you choose to clone your user interface, Clone Tailor will just clone the way you use your computer, not the computer's files and folders. This means that the program is dedicated to cloning only the way that you use your computer. It's not a simple copy of the files, it's a tailor made setting, almost like a clone of the appearance and operation. For instance, the software uses a slightly different set of files to manage your documents, in a separate set from the files for your music, photos, videos and other things. Your programs, as well as your desktop settings and your icons are each unique, because they can't be cloned without unwanted side-effects. A different set of programs When you launch Clone Tailor you are presented with a new set of icons, programs, toolbars, and windows. This will be the way that your computer looks and behaves. The program uses a clean and fresh user interface, it doesn't come with any filter programs, toolbars, or any other objects that might interfere with your use of your computer. Also, there are different sets of files available, depending on what you use your computer for. A different set of settings for
