January 15, 2020 - daimyo_1 (PS2 Loader Team) 1003 down loaded add a new version of "LoadElfPS2" and "OPLOPL" first one is a standalone PS2 Loader and the .Q: Time Complexity for Algorithms I was reading Complexity wiki and got a doubt. Which is right? A1.'Time complexity of a function is the number of steps it takes to evaluate this function' A2.'Time complexity of an algorithm is the maximum time taken by this algorithm.' A3.'Time complexity of a function is the number of steps it takes to evaluate this function.' A4.'Time complexity of an algorithm is the maximum time taken by this algorithm.' A: A3 and A4 are the same thing, and A1 and A2 are different. A3: Let f be an algorithm (or in fact a function) which takes $O(n)$ steps. Then, if we consider the time complexity of f as a function, it's the number of steps it takes to evaluate this function (i.e. the base-2 logarithm of its execution time). A4: Let f be an algorithm (or in fact a function) which takes $O(n)$ time. Then, the time complexity of f is the number of steps it takes to evaluate this function. Asthma care during winter time in US adults: a focus on health care utilization and costs. Asthma care during winter is crucial to improving asthma management, but little is known about asthma care during winter in the United States. To compare adherence to guideline-recommended asthma care and asthma-related costs during spring and winter in US adults with asthma. Cross-sectional analysis of the 2007 Medical Expenditure Panel Survey. Analyses were adjusted for type of insurance coverage, asthma severity, and time of interview. Adherence to guideline-recommended asthma care during winter was measured using two items: "I checked my airflow/breathing monitor regularly throughout the day" and "I used my inhaled bronchodilator regularly (i.e., at least twice per day) when needed". Of the 2,056 adults (mean age 41.6 years; 95%CI 40.2-43.2 years; 57% male) with asthma, 61.0% reported checking their monitor frequently and 75.5
