What people are saying about Fluffy Systems: The icons are good, just I would like a more... light color but other then that, good. Thanks.The present invention relates to a circularly polarized lamp of a type usable for instance as a light source of a head lamp, and more particularly to a circularly polarized lamp in which, depending on the irradiation angle of light into the lens of a reflector for the reflector, the reflectivity in the case of right-handed circular polarization and the reflectivity in the case of left-handed circular polarization are changed. In general, such a lamp is not only usable as a lamp for exclusive use, but is also usable as a lamp usable for both frontward and rearward directions in a vehicle such as an automobile by merely changing the reflectivity by changing the irradiation angle of a light beam by the reflector of the lamp. Now, the lamp used for a frontward direction is referred to as a front-side lamp, and the lamp used for a rearward direction is referred to as a rear-side lamp. In a head lamp provided with a circularly polarized lamp, the lamp is used for a frontward direction, and the lamp is also usable for a rearward direction. In a conventional head lamp of a type which is usable as the front-side lamp and the rear-side lamp for the vehicle, it is difficult to effectively extract a light beam from the reflector of the lamp. For instance, the light beam emitted from the reflector of the lamp is subjected to reflection of less degree for a frontward direction. Therefore, in order to effectively extract a light beam from the reflector of the lamp, the intensity of the light beam which is directed to a front side of the vehicle is set relatively high. On the other hand, the light beam directed to a rear side of the vehicle from the reflector of the lamp is subjected to reflection of more degree, and therefore the intensity of the light beam directed to a rear side of the vehicle is set relatively low. FIGS. 1A and 1B are illustrations for explaining the conventional head lamp for the vehicle, in which FIG. 1A shows the

When you have a computer science degree, you are going to have a lot of free time and a lot of free ideas. You will also have a lot of time to design, test and perfect programs. I was sitting at the computer one day (probably in that calm afternoon period of the day) and realized that the folder icons in my computer were not as pretty as they could be. And so I took some time to give it a try to design these icons myself. I will be very glad to have some feedback on how I was able to come up with all these cool icons and when you are ready for them, you can download them and use them as your own. Each icon is 14x14 pixels in size. You will be able to download all the icons for free (details below). I will also be glad to include some interesting information regarding the design, history and philosophy of the system to the pack, if requested. However, this will take a lot of time, as I would need to make a short video to explain all these and I don't have one. Please contact me if you would like me to include it and I can then do it.
