GoHide Crack Activation Code With Keygen Free [Win/Mac] [Updated] 2022

goHide is a lightweight and portable application that enables you to easily hide the windows of currently running programs. It comes in handy whenever you want to quickly get rid of sensitive information when you think that someone is looking over your shoulder.

Portability advantages The utility's not wrapped in a setup kit. Instead, it's packed in a single executable file that can be saved to a custom directory on the disk or copied to a removable storage unit, in order to seamlessly launch it on any PC with minimal effort and no previous setup. It doesn't add new entries to the system registry, create files on the disk without your permission, or need DLLs or other components to work properly. In order to uninstall it, you simply need to delete the.exe item. Simple interface and options The GUI of goHide is user-friendly, represented by a small window with a straightforward look, which shows all settings provided by this app. It doesn't put emphasis on graphical elements, yet it's easy to navigate. The currently running programs are automatically detected at startup and listed in the main panel, so you can scroll this list to identify the window you're interested in. Hide and show windows Clicking on an entry displays additional details about the window, such as handle and status, along with the left, top, right and bottom margin. Any window can be hidden with the click of a button, and its status can be restored to visible just as easily. Hidden windows disappear from the taskbar and systray. However, the corresponding processes can still be viewed from Task Manager. Another aspect worth noting is that hidden windows are not indicated in any way in the control panel. Evaluation and conclusion Although it hasn't received updates for a long time, it worked smoothly in our tests on newer Windows models. We haven't experienced any compatibility issues and it didn't hang or crash. CPU and RAM usage was low. Thanks to its intuitive interface and options, goHide can be handled by anyone. What is new in this release: What is new in version 2.0.5: Version 2.0.5 is available with the following improvements: * Improved Visual C++ Runtime library. * Increased compatibility with 32-bit and 64-bit systems. * Added option to hide automatically when the taskbar is locked. * Added option to set the wallpaper to the currently active window. * Added option to enable the notification area for each window

GoHide Crack +

KeyMacro is a simple yet powerful multi-user utility that enables you to record keyboard actions in any application. Simply activate the recorder, type a macro, and then press "record" on the keyboard. You can repeat the macro any number of times to copy a series of actions. You can also edit the macro during playback, add or remove tasks, and then save it for future use. KeyMacro has some special features that you probably didn't know about. There are two types of macros: hotkeys and loops. Hotkeys allow you to define any combination of commands using Alt or Ctrl keys. For example, you can create a macro with Alt-F-1 to open a folder, Ctrl-F-2 to open a file, Alt-F-3 to open a web browser, and so on. Loops enable you to run a series of commands without having to type them all at once. This feature is extremely useful for repeated actions and it's very similar to the macros you can create with Hotkeys. For instance, you can select a series of commands by holding Alt-F-1-1-F-2-3, F-2-1-1-3, or F-1-1-1-2-3, in sequence. You can trigger both types of macros from the keyboard, from the context menu, from the main window, or from the desktop. KeyMacro has a powerful file editor where you can manage all macros. Each task can be configured to play or pause, repeat or stop on mouse click, and so on. You can also set the macro to repeat indefinitely or until the mouse is clicked, record a part of the screen, and so on. You can use the macro recorder in two different ways: you can record the keyboard actions or you can directly play the commands. KeyMacro can run on Windows 98, Windows 2000, Windows XP, Windows 2003, and Windows Vista. One of the features I like the most is the ability to create different keyboard combinations to perform different actions. For example, I can set a macro with Ctrl-F-1-F-2 to open a file, Ctrl-F-2-F-1 to close a window, and so on. You can also set Hotkeys and Loops. Other features of KeyMacro include an extensive Help section, built-in Windows Text to Speech, pre-built presets, and so on. KEYMACRO Evaluation and 77a5ca646e

GoHide Crack+

One of the most frequently asked questions from newbies is what is the best way to hide a window. Thanks to goHide, you no longer need to worry about the layout, transparency or hardware requirements, as this app can hide any window you want. Simple to use, intuitive to use, effective. GoHide is a lightweight and portable application that enables you to easily hide the windows of currently running programs. It comes in handy whenever you want to quickly get rid of sensitive information when you think that someone is looking over your shoulder. Portability advantages The utility's not wrapped in a setup kit. Instead, it's packed in a single executable file that can be saved to a custom directory on the disk or copied to a removable storage unit, in order to seamlessly launch it on any PC with minimal effort and no previous setup. It doesn't add new entries to the system registry, create files on the disk without your permission, or need DLLs or other components to work properly. In order to uninstall it, you simply need to delete the.exe item. Simple interface and options The GUI of goHide is user-friendly, represented by a small window with a straightforward look, which shows all settings provided by this app. It doesn't put emphasis on graphical elements, yet it's easy to navigate. The currently running programs are automatically detected at startup and listed in the main panel, so you can scroll this list to identify the window you're interested in. Hide and show windows Clicking on an entry displays additional details about the window, such as handle and status, along with the left, top, right and bottom margin. Any window can be hidden with the click of a button, and its status can be restored to visible just as easily. Hidden windows disappear from the taskbar and systray. However, the corresponding processes can still be viewed from Task Manager. Another aspect worth noting is that hidden windows are not indicated in any way in the control panel. Evaluation and conclusion Although it hasn't received updates for a long time, it worked smoothly in our tests on newer Windows models. We haven't experienced any compatibility issues and it didn't hang or crash. CPU and RAM usage was low. Thanks to its intuitive interface and options, goHide can be handled by anyone. Descriptions If you are working in an environment where you need to hide windows and quick-launch applications for personal safety, you should try goHide. Its small size and simple interface make it an ideal application for this job. In addition to this, it's portable enough to be installed on removable storage units or to be copied to any other computer with no complicated setup. First, goHide offers the ability to hide windows, taking a screenshot of each window before hiding it. This helps to make sure that the hidden content is indeed removed from the screen, since the window can be restored later. The window will be hidden when you click the Hide button, and its corresponding application will be hidden too. The utility works with any program that can be launched in the normal fashion, without specific requirements. Only a shortcut can be created for each window in order for goHide to properly recognize the program.

System Requirements:

- OS: Windows Vista and up - RAM: 256 MB minimum, 512 MB recommended. - VRAM: 2MB minimum, 3MB recommended - DirectX: 11 - Sound Card: any, DirectX 11 compatible is recommended - Storage: 500MB minimum - Resolution: 1024x768 minimum
