Percutaneous methods of access to malignant liver tumors often are preferred to surgical techniques. These include percutaneous localization of the tumor and transcatheter arterial chemoembolization. At present, the sonographic appearance of various tumor-associated vascular phenomena, such as tumor thrombi, arterio-portal shunts, and abnormal shunts, is not well established. The purpose of this study is to describe the sonographic appearances of hepatic artery tumor thrombi and arterio-portal shunts in the liver. A segmental portal vein catheter was used in two patients to inject boluses of microspheres and iodized oil. In the first patient, the results were compared 3e33713323
