redis-node be used in production? I have a configuration similar to the one in the following link. In this link they say that the support of redis.io is not stable. I wonder if anyone has tried running redis-node in production. And if yes, what are your thoughts on the stability of redis-node? A: Yes, you can run it in production. It's pretty stable. But I would not recommend it. redis is a bit of a rough beast. It's a single threaded beast, which makes its performance dependant on that thread and how many things it has to do. You are in fact at the mercy of the thread pool and the way you want to use redis in your application. This is a good little video that demonstrates the use of redis with redis-node. It also demonstrates the use of the redis client. Neutrophil-derived matrix metalloproteinases (MMP-8/Gelatinase B and MMP-9/Gelatinase B/92 kDa gelatinase) are major determinants of intrahepatic stellate cell growth.
