The 2019 Autodesk AutoCAD User Guide supports AutoCAD 2017 Release 30, which is currently available for Mac, Windows, Linux and iPad. Contents Getting started with Autodesk CAD If you are new to Autodesk CAD, this guide will help you get up and running quickly.

It covers the basics of drawing in Autodesk CAD, including drawing shapes, lines, arcs and circles. It also explains how to annotate, modify and duplicate objects, and includes tips for drawing in ortho and perspective views. AutoCAD Review & Command Reference is useful for experienced users of the software. See the AutoCAD User's Manual for more information. AutoCAD basics Drawing in CAD Use the Pen tool to draw lines and shapes To draw a line or shape in AutoCAD, select the line or shape and then click the Draw button (or press the space bar). The line or shape will automatically appear in the drawing area, as shown in the figure below. The line or shape can be modified in different ways as described in this section. DXF, supports import from CAD, GIS, and other formats. HTML5, provides mobile web applications and web applications by using the HTML, JavaScript and other web technology. Network interoperability Autodesk design and engineering software can interoperate with most other Windows, Linux, and Mac applications that support the Application Programming Interface (API) standard, Open Applications Interface (OAI). When using a CAD or GIS application, the OAI standard allows the CAD or GIS software to interact with other Windows-based software using standard operating system application programming interfaces (APIs), such as the Microsoft Windows API. In addition, there are CAD interoperability standards: NX Open and eCADlink. Academic and technical software Academic and technical software may be created using AutoLISP, Visual LISP, JAVA, or JavaScript. Licensing Autodesk licensed software (including academic and technical software) are typically available through two types of licenses: perpetual, and per-user, per-computer. Perpetual licenses are considered to have an unlimited lifespan, and are typically used for professional software, while per-user and per-computer licenses are intended for non-professionals. A perpetual license costs one or more hundred times the cost of a per-user license, and includes all future updates and support for the software. A per-user license is the primary choice for single users, or a small number of users.

A per-computer license is the choice for a single computer, and is generally only used for personal use. A per-computer license allows installing and using the software on up to ten computers at the same time. As with the above types of licenses, each license type has a cost.

For example, Autodesk's AutoCAD software can be licensed for a perpetual cost ranging from \$150 to \$15,000. Software purchases from Autodesk's web store are usually based on per-user or per-computer licenses. Academic and technical software created by students using AutoLISP, Visual LISP, Java, and JavaScript is usually licensed using per-user and per-computer licenses. As Autodesk develops new software, new licenses are typically added to the existing set of Autodesk software licenses, which are commonly called a software suite. Many types of
