\* \*\*Actions\*\* allow you to perform a series of tasks automatically. For example, one action could resize an image, another action could change its opacity, and a third action could apply an effects filter. Actions are useful for automating common tasks. To use an action, create the action and then select the actions that you want the action to perform. \*

---

**\*\*Bundles\*\*** allow you to run a series of actions at once. The best use of bundles is when you want to apply several effects or tasks at once. For example, you might use the bundle to create a colored watermark on an image.

\* **\*\*Brush Effects\*\*** let you add special effects to a brush. These tools enable you to change the size, shape, blending modes, and pattern of an existing brush. \*

**\*\*Canvas Size\*\*** allows you to choose the size of the canvas.

---

This controls the area where you can create and edit text or images. \* **Brush Settings** \* let you customize the look and feel of a brush. You can change the diameter, opacity, and type of a brush. \* **Crop** \* allows you to crop your image in a number of ways. To crop an image, hold down the [Shift] key, select the area you want to keep, and then press the [Enter] key. Or, to crop an image in one step, select a rectangular area, and then press

---

[Ctrl] + [R] + [Enter]. \* \*\*Crop to Selection\*\* allows you to apply the Crop tool to only a selected area or selection of an image. To use this tool, press [Shift] + [Ctrl] + [R] + [Enter] or select a selection first and then press [Enter]. \* \*\*Dodge\*\* and \*\*Burn\*\* are two special effects that add a slight lightening or darkening effect to the pixels in an image. The Dodge tool works by letting you paint black into an area of an image. The Burn tool

---

works by letting you paint black over an area of an image. These tools help you to create a specific look when you apply the Photoshop version of a filter or overlay. \* **Fill** is an adjustment made to the color of your image. With the Fill tool, you can make an area of your image a solid color or paint a color over an area. \* **Fix** is a tool that makes minor adjustments to your image.

[Evaluation of a total care method for resolving the immediate health care needs of the elderly, in Rio de Janeiro, Brazil, 2008]. This article analyzed the process of evaluation of the programs for providing integral care to the elderly, and the methodological criteria established by the Ministry of Health, regarding accessibility and social acceptability, according to the

---

proposal of Resolution RDC 01/92. A survey using quantitative and qualitative methods was conducted with 369 elderly people attended in the city of Rio de Janeiro. The data collected for the evaluation of the program were presented according to the following domains: Human resources, services, environment, and activities. The results showed that the services provided to the elderly had higher standards and

---

the program had good accessibility; however, in relation to the environment, the standards could be improved. This invention relates to friction stir welding and more particularly to a method and device for providing discontinuous weld lines in a friction stir welding operation. Friction stir welding is a solid state welding process invented by the present applicant. In the friction stir welding process, a

---

rotatable tool having a shoulder is plunged into two abutting, overlapping workpieces. The shoulder is at a lower temperature than the workpieces and, as it is plunged into the workpieces, the shoulder is rotated and friction heat is generated. As the shoulder exits the workpieces the workpieces soften and together they are forced into engagement with one another to form a continuous weld. During the process the

---

workpieces are held in position by a force applied to the second workpiece. U.S. Pat. No. 5,460,317, which is incorporated herein by reference in its entirety, is directed to a friction stir welding machine which can be used for making the aforementioned type of weld. In the friction stir welding process, it is difficult to make a weld discontinuity i.e., a joint between two pieces of metal. The hot tip of the rotatable tool

---

sometimes will tend to wander out of position with respect to the workpiece and in some circumstances the friction stir welding process can be disturbed by extraneous vibrations of the workpiece. While this invention was motivated in addressing the above described problems and improving upon the prior art, it is in no way so limited. The invention is only limited by the accompanying claims as literally worded, without interpretative or

---

other limiting reference to the specification, and in accordance with the doctrine of equivalents. Q: I'm trying to get the text of my selected item in a listbox
