Effect of cyclohexylamine on the cleavage of N-hydroxycyclohexylpiperidine with hydrogen peroxide in microsomes. It has been shown that a cyclohexylamine-induced form of cytochrome P-450, designated as P-450b, is unable to catalyse the N-demethylation of N-hydroxycyclohexylpiperidine [Hama, Y., Nishida, K., Yamaguchi, S., & Hamaguchi, E. (1975) J. Pharmacol. Exp. Ther. 194, 227-233]. The hypothesis of such enzyme inactivation is that binding of the cyano group of the substrate by the highly positive heme pocket of cytochrome P-450b is responsible for this, by preventing access of the substrate to its active centre and, thus, of the substrate to the electron transfer/reductase action of this cytochrome. In this study, we have examined the effect of cyclohexylamine on the reaction between P-450b and H₂O₂ in microsomes. Incubation of microsomes with H₂O₂ (1 mM) caused complete and irreversible loss of P-450b as measured by means of a reconstitution procedure. The addition of cyclohexylamine (1 mM) prevented the loss of the P-450b. These results suggest that, in the enzyme-catalysed reaction between N-hydroxycyclohexylpiperidine and H₂O₂, H₂O₂ reaches the active centre of P-450b through the opening of an active site pocket in the substrate-protein complex.Satish Kumar (Lalu) (controversial personality) Satish Kumar, popular
