A power transmission belt of this type is made by first extruding a polymeric tape having a base construction comprising polymeric material, such as a polyester polymeric tape, and reinforcing cords or yarns in the form of a layer at least partially embedded in the polymeric tape. The extruded polymeric tape is then cut to predetermined length, as is also the in-plane reinforcing cord or yarns. The entire layer of the reinforcing cords or yarns and the polymeric tape are then thermo-compressed to reduce the length of the reinforcing cords or yarns in the polymeric tape, form a plurality of parallel helical convolutions in the polymeric tape along an axial length of the polymeric tape, and to cordon the reinforcing cords or yarns in the form of a series of individual helical convolutions in an axial direction along the length of the polymeric tape. The spacing between adjacent parallel helical convolutions of the reinforcing cords or yarns is substantially uniform over the width of the polymeric tape. As will be described in more detail hereinafter, the present invention relates to a polymeric tape in which all of the reinforcing cords or yarns are located substantially in only one continuous helical convolution of the polymeric tape along the axial length of the tape. { "ver": "2.2.0", "uuid": "e7231827-b35e-4d92-b8e0-a96972231ac7", "type": "sprite", "wrapMode": "0", "filterMode": "1", "premultiplyAlpha": false, "subMetas": { "flat\_polly\_4":
