## What's New In?

Markup in AutoCAD is an automatic way to import CAD file or a PDF file to your drawing. You can mark up a paper printout or a digital drawing using a typeface, color, symbols, or line thickness, then automatically insert or link this drawing into your drawing and create new views and section cuts. Use commands such as Show Markups, Display Markups, and Unmark to add or modify the markup, and use commands such as Undo, Redo, and Clear Markups to make your markups permanent. The markups are always saved with the drawing and updated when a new version is saved. The markups are created and saved with the drawing so that you can continue to work on your drawing even while you are printing or distributing the document. (video: 1:55 min.) Unmark, Redo, Undo, and Clear Markups work the same way as they do in AutoCAD LT. You can use the Markups menu, Undo | Redo on the Quick Access toolbar, and Clear Markups | Options | Markup menu, to mark up your drawing with text, line symbols, color, symbols, and line thickness. The Markups menu also has commands for setting the insertion and linking properties of your markup. You can use the Markup Assistant to create the standard default markups, or you can select from one of the 200+ available pre-made markups. The Markups Assistant can be started either from the Markups menu or from the Markup toolbar. The Markups toolbar is available on the ribbon or on the Quick Access toolbar, and provides convenient access to commands for creating and editing markups. Use the Markup Assistant to help you create the markup, or select from the Markup toolbar to create a standard markup. You can choose from one of the 200+ available pre-made markups or create your own using the Articulation Wizard. You can save the Markups in a separate file format, such as PDF or DWG. Click here to view the current list of existing marker types and to see a video that demonstrates how to create a custom markup. Use the Markup Assistant or the Markup toolbar to select from one of the available standard or pre-made markups. Unmarking Unmarking removes an existing typeface, color, symbol, or line thickness from a drawing. You can also unmark a section or entire drawing.
