What is AutoCAD? First of all, let us understand what is AutoCAD software and how it functions. AutoCAD (Automatic Computer Aided Drafting) is a 2D Computer-Aided Design (CAD) software application that is widely used in architectural, engineering, and construction industries. AutoCAD is a software for creating various types of 2D architectural drawings, with the help of the digital drafting. This is used to create and visualize a product's design or check the design of an object. AutoCAD is an Enterprise-level software in which you can make various types of 2D plans and elevations. This software is designed by Autodesk to enable designers to create and organize their creative design and hence use it more efficiently and effectively. In case of AutoCAD 2017, a Graphical User Interface (GUI) has been introduced. This was to make the user interface more user-friendly and easy to work with. The basic structure of this software includes an outline, axis, blocks, 3D views, alignments, commands, templates, multilevel, text, and dimensions. Through a multitude of attributes, the user can draw, edit, and modify an object. The user can also create 3D models and have multiple views on the drawings. When it comes to 3D software, AutoCAD 2017 is the most popular. Apart from the 2D software, this software is also known for its 3D design tools and concepts. How does AutoCAD work? AutoCAD

Intracardiac echocardiography has been used in recent years for anatomical evaluation of intracardiac lesions. However, the quality of images may be limited by calcified structures or turbulent flow across the tip of the imaging catheter. We compared the visualization of intracardiac structures in patients undergoing intravascular ultrasound (IVUS) and intracardiac echocardiography (ICE) to determine if any structures were better visualized using ICE compared to IVUS. We retrospectively reviewed images of patients who underwent both ICE and IVUS. In-plane resolution was measured for both techniques. A total of 116 anatomic structures were identified using both techniques in 43 patients with coronary artery disease.
