The Bloobert Hyponome app is a fully-fledged desktop version of the Hyponome application that is used to create and manage Hyponome terms in the browser. From the free version, it allows you to create or search for terms, and allows the app to automatically generate terms. The Bloobert Hyponome app has a lot of features. These features are: Multi-lingual support 5 languages are supported, including Spanish, English, French, German, and Russian The site also offers localization for the 5 languages Langioosse support A great advantage to this app is that the display names of the Hyponome terms are used in the localized languages This makes it possible for users to be able to follow the sites and terms as it is being created, and even edit the language if they so wish. Moreover, the site itself is fully translated, with a fully developed translation workflow, which enables users to contribute to the translation. Chennai support In addition, the Hyponome site offers a specific support tool that allows the users to manage their Hyponome terms from Chennai This makes it even easier for users who are in Chennai, and feel more connected to their business, to be able to manage their Hyponome terms. Export of data Although not directly supported by the Hyponome site, there is also the possibility to export the terms to a CSV file. This feature can be useful for teams that use a different software that manages their Hyponome terms, such as the DocTrack app, or other products On the site, there is also the possibility to import the terms into a different system, allowing teams to transfer the
