Autodata Cd3 Full Torrent 56,6 Mb.

Sivan.Q: How to dynamically build a SQL statement from an array I've got an SQL query that looks like this
SELECT
column FROM table
WHERE column
='some value' OR
column ='some other value' OR column =

'yet another value'

Now I'm building a SQL statement from a list of column names (output from an API call) that I want to lookup. I have no idea how to approach this.

The only approach I can come up with is doing this:

```
$columnArray =  
    array(1, 2, 3);  
$whereClause =  
array('column' => '*',  
    'column' => '*',  
    'column' => '*');  
$result = 'SELECT *
```

```
FROM table '  
foreach($columnArray  
as $column) { $where  
Clause[$column] =  
$someValue;  
$result.= 'WHERE '  
$column.=' '  
$someValue. "' OR '  
$result.= ')'. PHP_EOL;  
6d1f23a050
```
