Is this an old article.Optimising right ventricular support therapy in acute respiratory distress syndrome. In acute respiratory distress syndrome (ARDS), the right ventricle (RV) can develop failure that contributes to end-organ dysfunction. In the past decade, ventilation strategies have shifted away from restrictive to open-lung strategies that may result in a lower RV/left ventricular (LV) end-diastolic volume ratio, allowing the RV to survive the initial days. However, this may be problematic as the RV has a limited reserve capacity. To review the evidence for optimal RV support in ARDS and identify areas of further research and clinical practice development. The data from trials of RV-specific interventions were reviewed and the best evidence identified. High-volume fluid restriction and diuresis are most commonly used to support the RV, and this therapy results in small reductions in RV afterload. Moderate-volume fluid restriction is

The PCBA is a very compact, ultralow-profile, 84mm*63mm PCB. With its low profile design, the DIO can be easily mounted to almost any part of the enclosure. We use only the best components. This DIO controller series works with a wide range of microcontrollers and other IO. We recommend using this DIO controller with a supply voltage from 5V to 24V.Firmware • This firmware can be. for Arduino 1.0/1.1/1.2, WIC, WIC2 and VIDIO.All the diode matrixes are. component DIGITAL DIRECTION INPUT (DIO) or PINOUTS or PINS. (7 pin), the DIGITAL DIRECTION OUTPUT (DOUT)or PINOUTS or PINS. Both terminals can be connected to each other 6d1f23a050
