Physics, Kane and Sternheim, Wiley. This is a thorough text, very well written and illustrated, which could serve as a reference for many years. (I'm not sure it couldn't be more complete, but it isn't.) I haven't read the book, A History of Experimental Learning, which should be even more fundamental, but it deals with other areas, such as A History of Mathematical Experimentation. Written by Michael Rivell and Richard A. Appleton. You can find this book in any store, it only costs \$20 and is one of my favorites. I also haven't read George Weiss's book, Information Theory.
