translation and repository recreation. this software gives a integrated procedure to creating and reviewing the static model and elements of the well, after which dispensing with all correspondence issues between various software for the different improvement of these models and the inconsistency of data information at each stage and/or they lack their capacity to trade information that occurs

when using various software. it captures the information you gives, forms it as needs be and produces itemized outcomes. also, it makes certain that there are no data jumbles and info misfortune. coordinate new data, update the models, and perform various other activities to bring down the dangers when on the field. also, you can import and perform components and create

various reports to get the best yield. all things considered, petrel is a finished answer for picture and oversee subsurface difficulties alongside store recreation. we commitment to technology and quality is one of schlumberger strategies. petrel 2021.1 delivers the latest updates in field workflows, functioning, and productivity. it also leverages the power of the delfi cognitive e&p

environments data ecosystem to bring the latest advances in cognitive technology to your favorite e&p platform whether you're working in the delfi environment or on-premise. 5ec8ef588b
